

I COMP

Automated Multi-State Policy Administration Software

iComp is a fully integrated, multi-state workers compensation processing system. iComp consists of several integrated modules in Policy Administration and Financial Management to cover the complete workers compensation business cycle. iComp supports full-service Workers' Compensation carriers, Third Party Administrators, Self-Insured funds, MGA, TPA, or other workers compensation entities and includes the following modules:

- Application & Quoting
- Policy Management
- Billing & Receivable
- Cancellation & Reinstatement
- Commission Processing
- Loss Control
- Audits
- Renewal
- Claims Tracker
- Document Management
- Bureau Reporting
- Mail Merge
- Data Import and Export
- Journals & Notes

The application module stores and processes quotes and binds a Workers' Compensation policy. A submission may be quoted with several user defined products and billing plans. The printed quotes can be saved as a MS Word or PDF document which can be printed, faxed, or E-mailed.

iComp provides an advanced multi-state, multi-location rating engine for workers' compensation coverage including Increased Employer Liability, USL&H, Maritime, Waiver Subrogation, and state-specific surcharges.

iComp incorporates a powerful policy and endorsement issuance system allowing for automatic generation of Policy Forms upon policy issuance. In addition to the information page, endorsements, and schedules, other forms such as a cover page may be added using Microsoft Word to produce a complete policy package with a click of the button.

iComp provides comprehensive agent accounting and flexible commission processing including fixed commission percentages for new and renewal in addition to tiered percentages based on premium volume.

CBSI iComp is robust and flexible enough to accommodate all of your workers' compensation insurance needs. iComp was built under the direction of a major workers' compensation insurance fund.

A QUICK LOOK...

Allows for multiple Quotes per Application and quick access to existing applications

Real-Time Policy processing with automatic rating, underwriting, billing, policy issuance, policy audits and policy renewals

Automatic Generation of Policy Forms upon policy issuance and policy change.

Automatically selects candidates for cancellation and reinstatement based on non-pay of invoices or missing self-audit reports

Unlimited numbers of commission splits among various agents are allowed

Facilitates entry and processing of periodic and interim audits

Automatic Generation of Loss Control tasks based on user defined rules and triggers

The iComp's Document Management Module provides an efficient process for creating, accessing, and storing documents.

Additional Features

- Allows for the printing, faxing, and emailing of insurance quotes and provides a straight-forward binding process
- Provides unlimited number of user-defined and user-maintained fields and Unlimited number of Notes and Journals for each Insured, Policy and Agent
- Provides access to the financial records of a policy directly from a policy screen and maintains a complete cancellation and reinstatement log for the policy
- Allows for multi-unit, multi-state policies with a flexible Anniversary Rating Dates and unlimited experience modification splits
- Users can define custom policy forms using Microsoft Word and associate these forms with policy events. In addition, Policy forms are automatically archived and can be viewed or printed at any time
- iComp allows for unlimited products and billing plans setup, rate tables, custom adjustments and fees
- Provides automatic final audit processing for canceled and expired policies and facilitates entry and processing of periodic and interim audits
- Tracks both physical and voluntary audits and generates the final debit or credit invoice when the final audit is entered
- Allows changing and quoting a renewal before actual renewal of a single policy or a group of policies.
- iComp includes built-in scheduling and management tools for loss control related activities. The system allows planning and tracking of Loss Control Tasks including pre-binding inspections, regular surveys, meetings, and other user-defined tasks.
- Allows for user defined survey forms, recommendation and follow-up letters for different type of loss control tasks. In addition, you can store cost associated with a Loss Control task, if desired
- Integration with CBSI Accounting 98 and Microsoft Office (Word, Excel and Outlook)
- Allows user to work with multiple data forms simultaneously (view or edit two or more policies, etc)
- Reports can be saved in many formats (Adobe PDF, Microsoft word, Microsoft Excel, Windows RTF, etc...)
- In addition to the comprehensive management built-in reports, iComp includes an optional report writer interface that allows users to create custom reports in CBSI iQuery
